Drug Wars™

Crime Patrol 2: Drug Wars is a groundbreaking DVD release that allows you to play a fully interactive version of the classic laser-disc arcade shooting game using your controller.

THE OBJECT

You're a narcotics officer working the streets to battle street dealers, smugglers and a South American drug cartel. These are the toughest of criminals and they aren't going to give you any room. You'll start off in Sierra County working with the local law enforcement to rid the county of the stench of drugs. If all goes well, the director is looking for officers who can handle even tougher assignments.

Moving up the ranks, you'll be working with the narcotics division in Chicago's police department, and stopping the smuggling ring plaguing the border with the best border patrol in the business. If you can handle all of that action, the director has a team ready to move in South America, they just need a competent leader with some experience. Lopez the narcotics king of South America must be stopped, and you must be the one to stop him!

MENUS

To start the game, simply place the Drug Wars disc in your DVD player. The introduction video will play which may be skipped by pressing the Enter button. Once the menu appears, you may select one of the choices by using your controller. The options include:

Play

This menu selection allows you to play the full version of Drug Wars using your remote to control the targeting of your gun. You will be asked to select "Gimme A Chance" or "Bring it On". The "Gimme A Chance" selection will give you more time to move the gun-sight on the screen before the shot must be made. This difficulty setting may be the only level possible on some DVD players with Infra-Red remote controllers as they typically don't respond as fast as controllers that are directly connected to the DVD player (such as the PlayStation 2).

You may register this program on-line at <http://www.digitalleisure.com>. We highly recommend you do this so that we can advise you of new program versions, new releases and special offers.

CONTROLS

When in a situation where you need to use your gun, a gun-sight will appear on the screen. Use the directional buttons for the directions left, right, up and down and use "Enter" to fire your gun. There are many variations on the naming and placement of these buttons between different DVD controllers but the directional buttons will be the same ones that allow you to move between menu items when the menu is displayed and the "Enter" button (sometimes called "Play") will be the button that selects a menu option.

PAUSING THE GAME

You can pause and resume the game using the "Pause" and "Play" buttons.

STOPPING THE GAME

Pressing the Stop button will generally stop the game and turn the DVD Player off. Starting the game again (typically by pressing Play) will continue where you left off. In this case, the Drug Wars disc must be left in the player.

To quit the current game and return to the main selection menu, press Title.

PLAYING THE GAME

When playing Drug Wars remember that you must very quickly move your gun-sight when it appears on the screen, which you can do by repeatedly pressing the directional arrows on your controller. When your sight is in the position where you want to shoot, press the Enter button and the sight will change to a bullet hole. If you have shot in the correct place, the game will continue, otherwise you will die.

Practice Option/Level Choices

When the game begins, you will see a menu with four level choices. The first level (extreme left) is an optional practice level to allow you to take some target practice with the controller. The three other choices in "Sierra County" must be completed to continue through the game and can be completed in any order. When the gun-sight appears, move it quickly so that it is over top of the person shooting at you, and then press Enter to fire. If you are successful with the shot, the game will continue and you will have to shoot the next villain.

If the villain continually shoots you, you are either not positioning your sight in the correct location or you are not pressing Enter soon enough. Try again but position the sight in a different location and make sure you see the bullet hole when the Enter key is pressed. If you find that you are continually dying at a certain point in the game then you know that you must make a move just before this point. Take note of where the shooter is on the screen when you die and next time through, try positioning the sight and firing at that position on the screen. Remember not to shoot the innocent bystanders!

You initially have three lives. Once you have run out of lives you have the option to "Continue" the game from where you left off. However, there are only 9 continues so do your best to navigate through the game carefully.

On some systems when you press a key when the gun-sight is not displayed (which means it's not time for a move yet) you will get a message on your screen saying the key press is not being accepted. This shouldn't affect the game.

To defeat the game, you will have to rise through the ranks of the many narcotics divisions, and defeat all of the minor city rings, and eventually take out the narcotics king "Lopez" on his turf in South America.

Typically there will be a short pause in the video whenever a move is made. The duration of this pause varies from machine to machine but currently there is nothing that can be done to eliminate it. We're hopeful that future generations of DVD movie players will be optimized to handle this situation and will eliminate the pause.

All of the scenes from the original game are included in this DVD-Video version.

HINTS

The following may help you if you find you are getting stuck at certain areas of the game. We suggest you don't read any further in this section until you have played the game and only then if you find you are having trouble getting through a certain area of the game.

When playing the Chicago, Border and other scenes that have enemies popping up at random locations, try to recenter your gun-sight after every successful shot you take so that you are in better position to move for the next shot.

Troubleshooting

If you are having troubles getting the game started or seeing any video, make sure to switch your TV so that it displays the video from your DVD-Video player. Also, make sure to select the DVD input in your A/V receiver especially when you have a controller that controls several different devices in addition to DVD player such as your television or audio system.
